

Data Bite # 7 – Employment Outcomes

WTAMU Employment Outcomes

When prospective students are selecting a major, it is important to have the facts regarding future financial outcomes. The Graduate Employment Outcomes Dashboard allows students, parents, and other stakeholders to view two majors on the same screen and compare median earnings the first five years immediately following, as well as the median loan amount per major.

Median salaries per major are calculated using aggregate salaries acquired from the Texas Workforce Commission. To help maintain confidentiality, any major that produces less than 5 graduates in a year is removed from the dashboard.

Median loan amount calculations are from all loans reported to WT. Each graduating class has loan information pulled from ten years prior to their graduation date.
